

Introduction: Learn About Generative AI

Exploring generative AI concepts

Goals of this Unit

The goal of this unit is to introduce the basics of generative AI, such as what it is, the different kinds of content that you can create with generative AI, AI risks and limitations, and AI ethics.

After this unit, you will know:

- what generative AI is
- what AI can and can't do
- how generative AI can be used for generating text-based content
- how generative AI can be used for generating audio-based content
- how generative AI can be used for generating video-based content
- the risks and limitations of using generative AI
- the ethical considerations of using generative AI

You will put all of this knowledge into practice with an upcoming Portfolio Project. You can complete the Portfolio Project either in parallel with or after taking the prerequisite content—it's up to you!

Learning is social. Whatever you're working on, be sure to connect with the Codecademy community in the [forums](#). Remember to check in with the community regularly, including for things like asking for code reviews on your project work and providing code reviews to others in the [projects category](#), which can help to reinforce what you've learned.
